Introduction

The Discord (www.discord.com) social media site is used throughout this demonstration script. Discord is a good site to practice managing an account's credentials because

1. A reasonably low amount of effort is required to create an account
2. The site supports both passkeys and 2FA with an authenticator app
3. The site provides a “self-service” method to delete an account

When creating a Discord account, you must provide

1. A valid/active email address
2. A username
3. A password
4. A date of birth

You can also optionally provide a “Display name”; doing so is not necessary to the scenarios covered in this demo script.

In order to enable 2FA and/or a passkey with a Discord account, you must first verify the email address you provide when creating an account.

How to sign out of a Discord account

Note: To sign out of a Discord account...

1. Click the gear icon in the lower right hand corner of the left hand sidebar
2. Move the cursor so that it is “inside” the left hand sidebar
3. Scroll down until you see “Log Out” in the left hand sidebar
4. Click the “Log Out” item

Scenarios

A. Creating an account with SFA

Will do this during the SIG session if desired/needed.

A1. Signing in using Safari

1. Launch Safari and enter "discord.com" in the address bar
2. Click the "Log in" button found in the upper right hand corner of the page
3. Position your cursor in the "Email or Phone Number" textbox

A popup menu appears that has the Passwords app icon on the right hand side and a "fingerprint" icon on the left hand side. Between these two icons is the email address you supplied when creating the account.

4. Press the "biometric" key on your laptops keyboard

The two textboxes are auto-filled and the "sign in" button is automatically clicked. You are now signed in to the account.

5. Sign out of the account

A2. Signing in using Chrome

1. Launch Chrome and enter "discord.com" in the address bar
2. Click the "Log in" button found in the upper right hand corner of the page
3. Position your cursor in the "Email or Phone Number" textbox

Note that the popup menu (containing an entry for your account) does not appear. This is because the auto-fill feature of the Passwords app only works with the Safari browser; when using a browser other than Safari, you have to manually copy/paste your account credentials from the Passwords app to your browser

4. Launch the Passwords app and unlock it
5. Find and select the record for your Discord account
6. Click on the "User Name" field value; this will cause the value to be copied to the clipboard
7. Back in Chrome browser, click on the "Email or Phone Number" text box and paste via `Edit > Paste` or `CMD+V`
8. Repeat steps 6 and 7 except this time copy/paste your password from the Passwords app to Chrome
9. Click the "Log in" button

Note that a dialog box with the title "Save password?" with buttons labeled "Never", "No Thanks", and "Save". This dialog is asking you if you want Chrome to save your credentials for this account. We do not want Chrome to manage credentials for us, so we click either the "Never" or "No Thanks" button. If you click the "No Thanks" button, you will see this dialog the next time you sign in to this account in a Chrome window/tab; if you click the "Never" button, you should never see this dialog again (although I think it is possible you may see this dialog again but it you might not see it all the time.)

10. Sign out of the account

B. Enabling 2FA with an authenticator app

1. Sign in to your Discord account
2. Click the gear icon in the lower right hand corner of the left hand sidebar
3. If the page you then see does not say “My Account” at the top...
 1. Click on the “My Account” item in the left hand sidebar
4. Move the cursor so that it is “inside” the left hand sidebar
5. Scroll down until you see the “Enable Authenticator App” button
6. Click the “Enable Authenticator App” button

A dialog window appears with the title “Enable Authenticator App” should appear

7. Select (i.e. highlight) the set of (eight?) codes beneath the “2FA Key (Manual entry)” label
8. Copy these values to the clipboard via `File > Copy` or `CMD+C`
9. Return to the Passwords app; unlock it if needed
10. Select the Passwords record for your Discord account and click the “Edit” button
11. Click the “Set Up Code...” button
12. Activate the “Setup Key” textbox by clicking on it
13. Paste the codes you copied to the clipboard in step 8 via `File > Paste` or `CMD+V`
14. Click the “Use Setup Key” button
15. Click the “Save” button

Note how the “Code” field of your Discord account record in Password now shows a OTP and “countdown wheel” in the “Code” field.

16. Return to your browser window/tab
17. Click on the textbox to the left of the “Activate” button

A popup menu appears that has the Passwords app icon on the right hand side and a “fingerprint” icon on the left hand side. Between these two icons is the email address you supplied when creating the account.

18. Press the “biometric” key on your laptops keyboard

The textbox gets auto-filled and the current OTP and a dialog titled “Multi-Factor Authentication” appears.

19. Click on the “Password” textbox to activate it

20. Click on the “key” icon on that appears on the right hand side of the textbox; this will activate the Passwords app’s auto-fill feature

21. Press the “biometric” key on your laptops keyboard

22. A dialog titled “2FA is activate!” appears

23. Click the “Download Backup Codes” button

24.

25. Click the “X” icon in the upper right hand corner of the dialog

B1. Sign in with 2FA using Safari

1. Launch Safari and enter "discord.com" in the address bar
2. Click the "Log in" button found in the upper right hand corner of the page
3. Position your cursor in the "Email or Phone Number" textbox

A popup menu appears that has the Passwords app icon on the right hand side and a "fingerprint" icon on the left hand side. Between these two icons is the email address you supplied when creating the account.

4. Press the "biometric" key on your laptops keyboard

The two textboxes are auto-filled and the "sign in" button is automatically clicked. You are now signed in to the account.

5. A dialog titled "Multi-Factor Authentication" appears
6. Click in the "6-digit authentication code" textbox to activate it
7. A popup menu appears that has the Passwords app icon on the right hand side and a "fingerprint" icon on the left hand side. Between these two icons is the email address you supplied when creating the account.

8. Press the "biometric" key on your laptops keyboard

You are now signed into your account.

9. Sign out of the account

B2. Sign in with 2FA using Chrome

1. Launch Chrome and enter "discord.com" in the address bar
2. Click the "Log in" button found in the upper right hand corner of the page
3. Position your cursor in the "Email or Phone Number" textbox

Note that the popup menu (containing an entry for your account) does not appear. This is because the auto-fill feature of the Passwords app only works with the Safari browser; when using a browser other than Safari, you have to manually copy/paste your account credentials from the Passwords app to your browser

4. Launch the Passwords app and unlock it
5. Find and select the record for your Discord account
6. Click on the "User Name" field value; this will cause the value to be copied to the clipboard
7. Back in Chrome browser, click on the "Email or Phone Number" text box and paste via `Edit > Paste` or `CMD+V`
8. Repeat steps 6 and 7 except this time copy/paste your password from the Passwords app to Chrome
9. Click the "Log in" button
10. A dialog titled "Multi-Factor Authentication" appears
11. Return to the Passwords app
12. Making sure your Discord account's record is selected, click on the OTP in the Codes field to copy the OTP to the clipboard
13. Return to the Chrome window/tab
14. Click on the "6-digit authentication code" textbox and paste via `Edit > Paste` or `CMD+V`
15. Click the "Confirm" button

You are now signed into your account.

16. Sign out of the account

C. Disabling 2FA with an authenticator app

1. Sign in to your Discord account using the browser of your choosing
2. Click the gear icon in the lower right hand corner of the left hand sidebar
3. If the page you then see does not say “My Account” at the top...
 1. Click on the “My Account” item in the left hand sidebar
4. Scroll down until you see the “Remove Authenticator App” button (beneath the “Password and Authentication” section header)
5. Click the “Remove Authenticator App” button
6. A dialog titled “Remove Authenticator App”
7. Click the “Okay” button

You will be returned to the “My Account” settings page. Note that the “Authenticator App” subsection now has just one button labeled “Enable Authenticator”.

8. Sign out of the account
9. Return to the Passwords app and select your Discord account record
10. Click the “Edit” button
11. Click the “Delete Code...” button found in the “Code” field section
12. A dialog appears titled “Are you sure you want to delete this verification code?”
13. Click the “Delete Code” button
14. Click the “Save” button

D. Adding a passkey

1. Launch Safari
2. Load "discord.com" into a browser window/tab
3. Click the "Log In" button in the upper right hand corner of the page
4. Use your userid and password to sign in to your account
5. Click the gear icon in the lower right hand corner of the left hand sidebar
6. If the page you then see does not say "My Account" at the top...
 1. Click on the "My Account" item in the left hand sidebar
7. A dialog titled "Save a passkey" appears
8. Press the "biometric" key on your laptop's keyboard

Some additional dialogs appear...didn't capture them

9. Your browser window/tab should now again show the "My Account" setting page.

Note how the "Password and Authentication" section has changed

10. Now go back to the Passwords app
11. Unlock it if necessary
12. Find and select the record for your Discord account

Note a new "Passkey" field is visible. This field only appears to be visible in a Passwords app record after a passkey has been created for an account; the value of this field is the date the passkey was created.

13. Sign out of the account

D1. Signing in using Safari

1. Launch Safari and enter "discord.com" in the address bar
2. Click the "Log in" button found in the upper right hand corner of the page
3. A dialog titled "Welcome back!" Appears
4. Click in the textbox labeled "Email or Phone Number"
5. A popup menu appears that has the Passwords app icon on the right hand side and a "fingerprint" icon on the left hand side. Between these two icons is the email address you supplied when creating the account.
6. Press the "biometric" key on your laptops keyboard

You are now signed into your account.

7. Sign out of the account.

D2. Signing in using Chrome

1. Launch Chrome and enter "discord.com" in the address bar
2. Click the "Log in" button found in the upper right hand corner of the page
3. Double click on the "Email or Phone Number" textbox
4. A popup menu appears
5. Find and select the item from the menu that has the email address you gave when creating your Discord account and has "Passkey Apple Passwords" beneath it.
6. A dialog titled "Sign In" appears
7. Press the "biometric" key on your laptop's keyboard

You are now signed into your account.

8. Sign out of the account

E. Removing a passkey

1. Launch Safari
2. Load "discord.com" into a browser window/tab
3. Click the "Log In" button in the upper right hand corner of the page and complete the sign-in process
4. Click the gear icon in the lower right hand corner of the left hand sidebar
5. If the page you then see does not say "My Account" at the top...
 1. Click on the "My Account" item in the left hand sidebar
6. Scroll down the page until you reach the "Security Keys" section

You should see a row showing the name you gave the passkey when you created it.

7. Click the three dots on the right hand side of this row
8. In the popup menu that appears, pick the "Delete" item

You have removed the passkey from your account.

9. Return to the Passkeys app; unlock it if necessary
10. Find and select the record for your Discord account
11. Click the "Edit" button
12. Click the "Delete Passkey..." button in the "Passkey" field area
13. A dialog titled "Are you sure you want to delete this passkey?"
14. Click the "Delete Passkey" button

Note that the Passkeys app immediately saves the record when deleting a record's passkey; you are back in "edit mode"

15. Sign out of the account

F. Both enabling 2FA with an authenticator app and adding a passkey
Complete the steps in Scenario B. Then complete the steps in Scenario D.

Attempt signing and out of your Discord account first from Safari and then from Chrome. You should have the experience the same sequence of steps as you did when signing in when you had a passkey assigned to your account but no 2FA. Given that passkeys are stronger than all forms of 2FA, some sites will skip the sign in step where you provide the OTP when you have both 2FA and passkeys enabled on an account. Other sites will continue to prompt you to enter an OTP when you have both 2FA and passkeys enabled.
