

Explainer: Settings

Duke OLLI Digital Explorers SIG

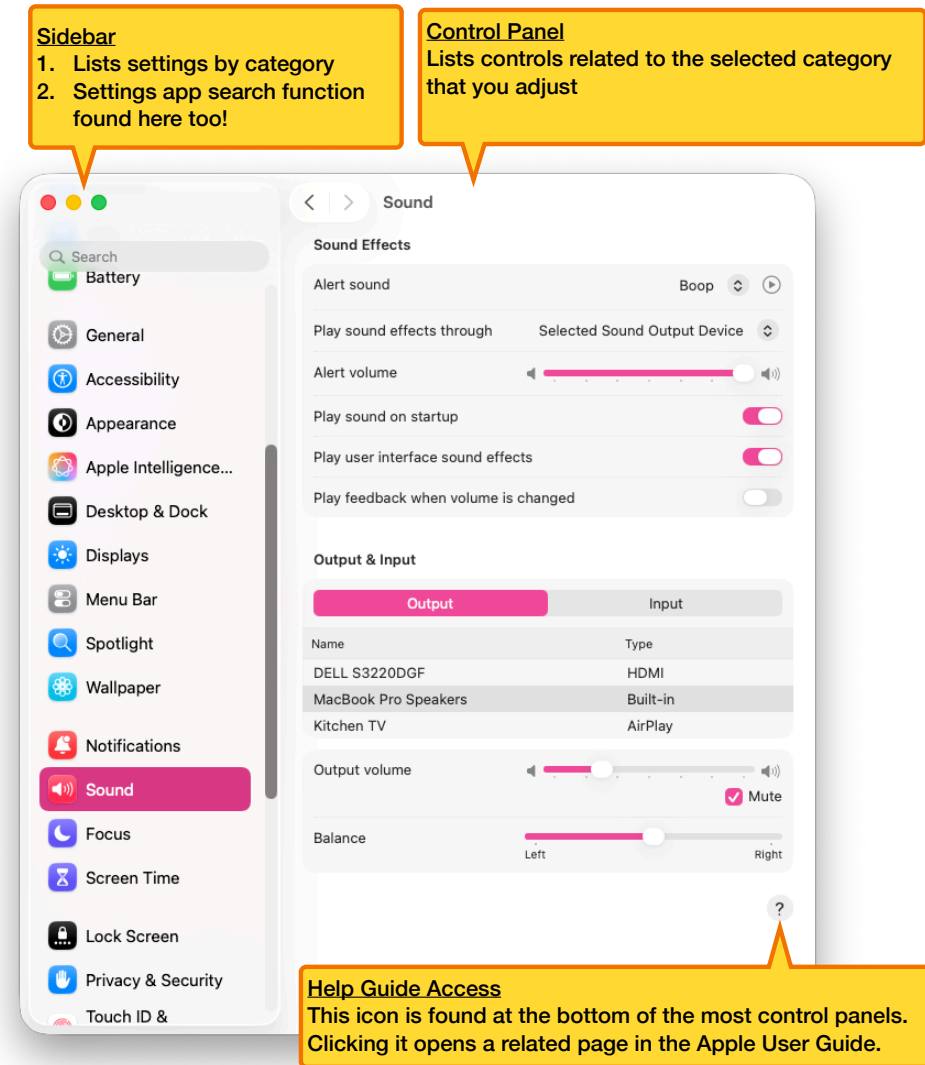

David Shamlin May 2026

Table of Contents

Topic	Page(s)
General • What is a setting? • Classification of settings	3-4
UI Overview • Note: page 12 has information on accessing Apple's help guide information on settings. The guidance on this page is the best pathway I've found to meaningful help information on Apple's systems settings	5-12
Possible pitfalls to be aware of	13-17
Inventory of System Settings	18 - <i>end</i>

What Is a “Setting”

- The image on the right shows the Mac System Settings app with the “Sound” **category** selected
 - The pane on the right hand side of the window is sometimes referred to as a **control panel**
 - Some geeks refer to the individual controls found in a control panel as settings; others refer to the category as the setting. E.g., some will call “Sound” a setting; others will call “Alert Sound”, “Alert volume”, “Play sound on startup”, etc, as settings
- **Note:** the term “**preference**” is sometimes used as a synonym of the term “setting”

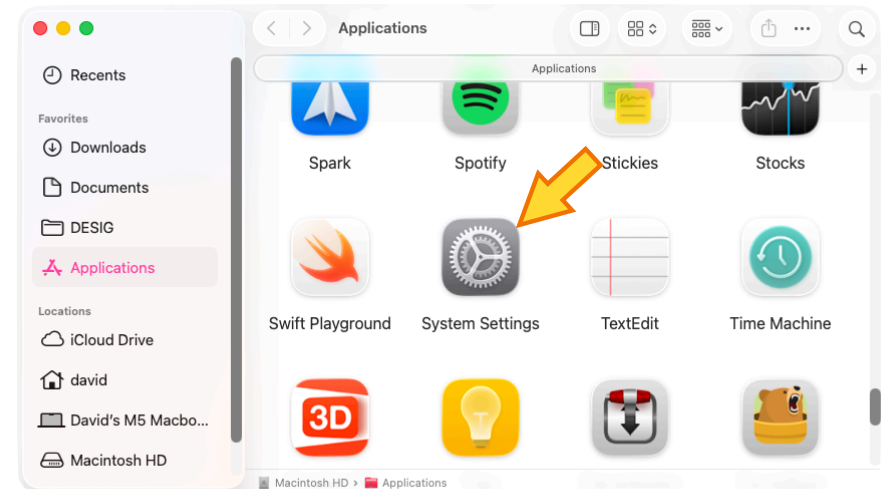

Classifying Settings

- Scope
 - **System:** relate to OS-level functionality; changing system settings has broad, “system-wide” affect
 - **App:** relate to an individual app’s functionality; affect of changing an app setting is limited to the app
 - Settings of apps installed on your device are stored on the device itself
 - Web app and account settings are stored “in” your account on the associated web site
- Role (i.e., general purpose)
 - **Informational:** (as the name implies) settings in this category simply provide you with information
E.g., “About”, “Legal & Regulatory” (iPad/iPhone only)
 - **Cosmetic:** affect the “look and feel” of the device
E.g., “Desktop & Dock” (Mac only), “Wallpaper”, “Accessibility”
 - **Functional:** affect the behavior of specific features of the OS (for system settings) or in an app
E.g., “Notifications”, “Sounds”/“Sounds & Haptics”, “Focus”
 - Settings that affect **privacy** and **security** are sub-classes (or “subtypes”) of functional settings
E.g., “Privacy & Security”, “Touch ID & Password”, “iCloud”
 - **Note:** there are a few System Settings categories that are primarily used in corporate/business environments
E.g., “Network”, “Startup Disk” (Mac only), “VPN & Device Management” (iPad/iPhone only)

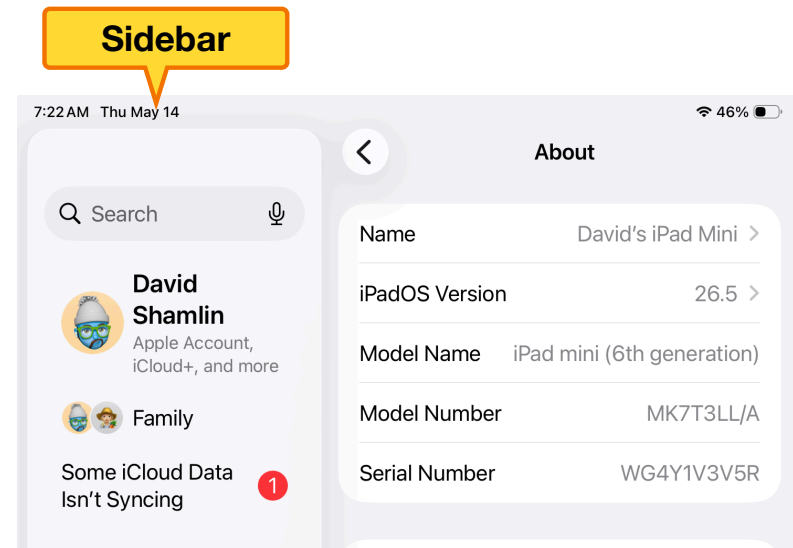

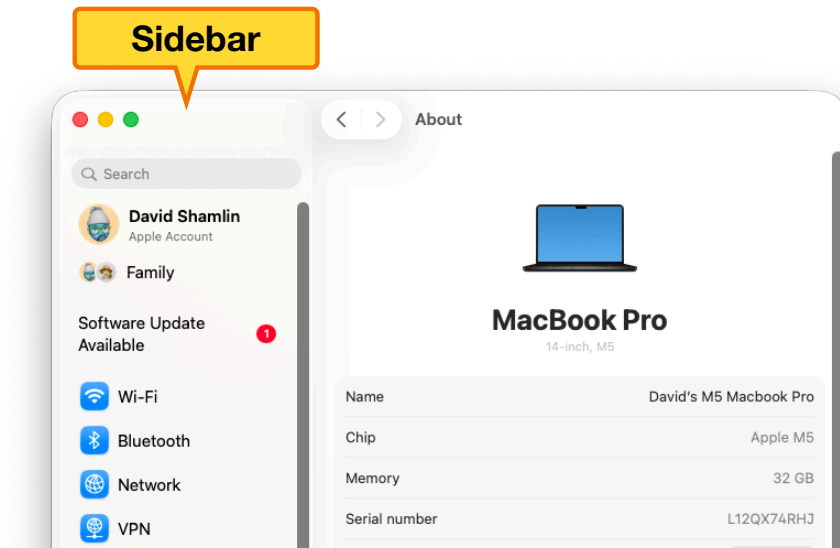

UI Overview

- Note the difference in the settings app's name on the Mac vs on the iPad/iPhone
 - On the Mac, it is named **System Settings**
 - On the iPap & iMac, it is called **Settings**
- This difference in app names reflects the difference between the **scopes** of both apps
- The **System Settings** app on the Mac only “contains” settings that only have system scope
- The **Settings** app on the iPad/iPhone “contains” settings for both system scope and app scope settings

UI Overview: the Sidebar on Mac and iPad

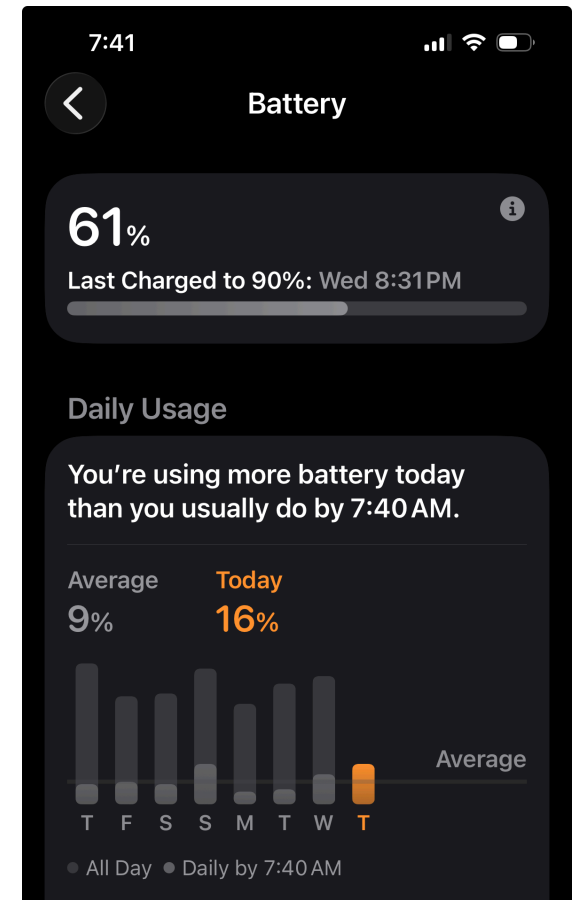

- On the Mac and iPad, the sidebar always appears on the right hand side of the screen
- The sidebar lists the Setting categories; clicking/tapping on an item in the sidebar causes that category's control panel to appear on the right side of the window/screen
- The **General** item found in the sidebar is an exception. Clicking on the **General** item in the sidebar causes the pane on the right to show the list of categories in the **General** group
- On Macs, the **View** menu in the Menu Bar shows all the categories; clicking on an item in this menu causes that category's control panel to appear in the app window; there is no equivalent to this feature on iPhones and iPads

UI Overview: the Sidebar on iPhone

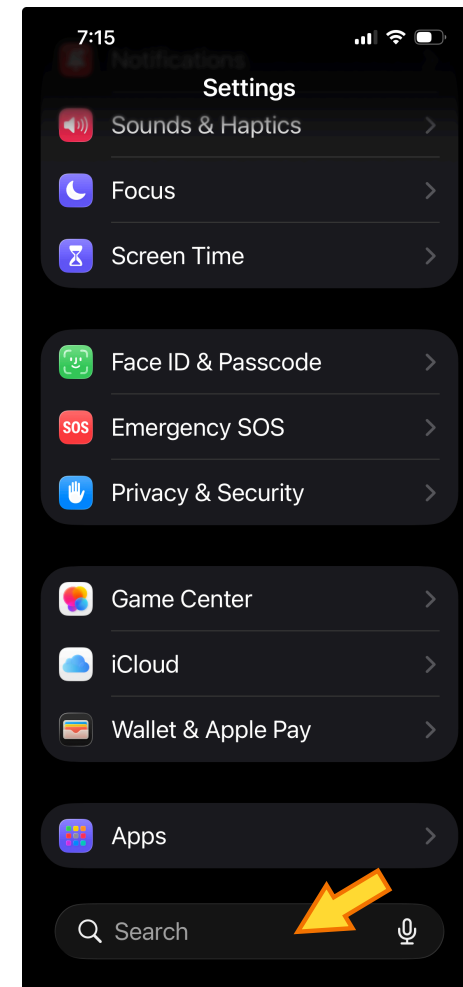

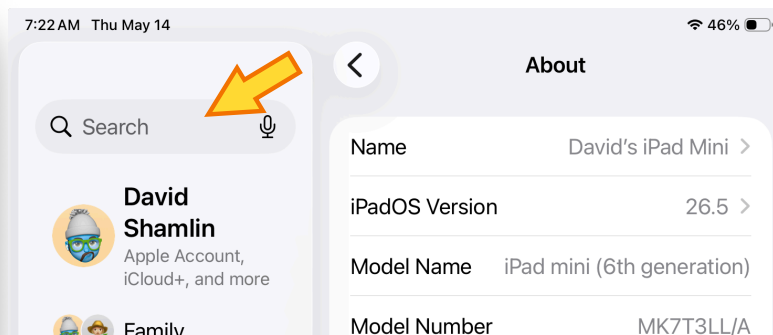

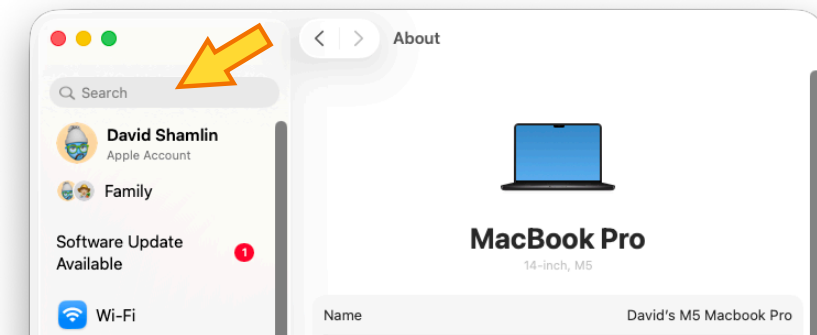

- The image on the right shows the sidebar view on the iPad
- When you tap on an item in the sidebar, the entire app window changes to the control panel for the category item you tapped
- To return from a control panel view to the sidebar view, tap the right angle bracket found to the left of the category name in the control panel view
- When you launch the Settings app, it appears to always show you the sidebar by default
- However, if you send the Settings app to the background when you are in a category view, you will still be on that category view when you return to the Settings app

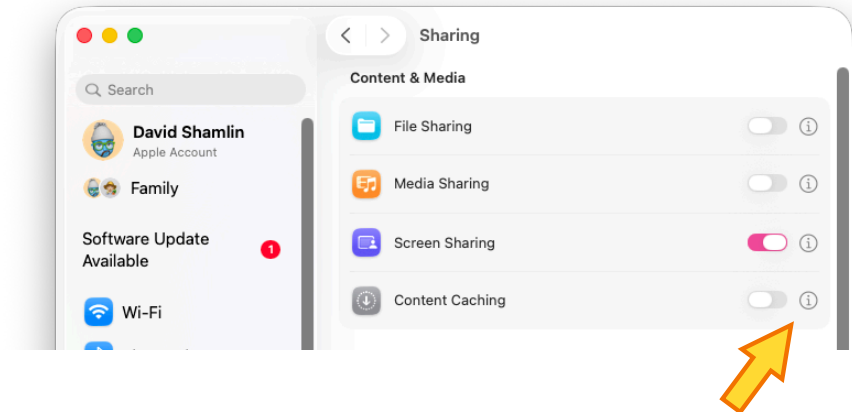

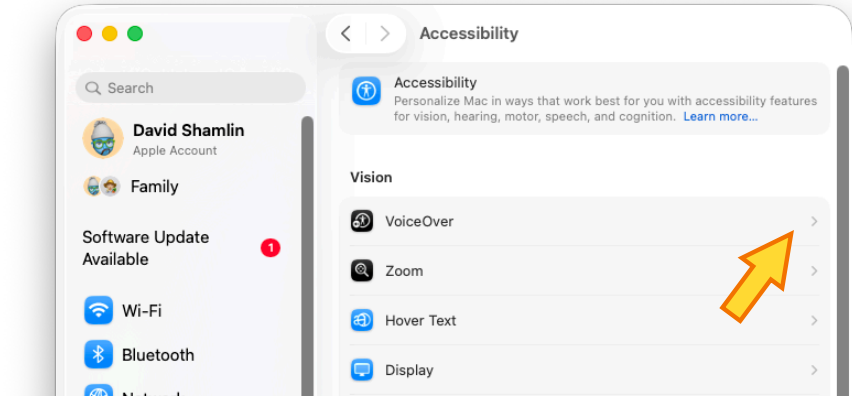

System Settings/Settings apps Search Feature

- The **System Settings** and **Settings** apps have a search textbox in their sidebars
- On Macs and iPads, this search textbox is at the top of the sidebar; on iPhones, it is at the bottom of the sidebar
- Help Guide pages on this search feature:
 - Mac: [Find options in System Settings on Mac](#)
 - iPad: [Find settings on iPad](#)
 - iPhone: [Find settings on iPhone](#)

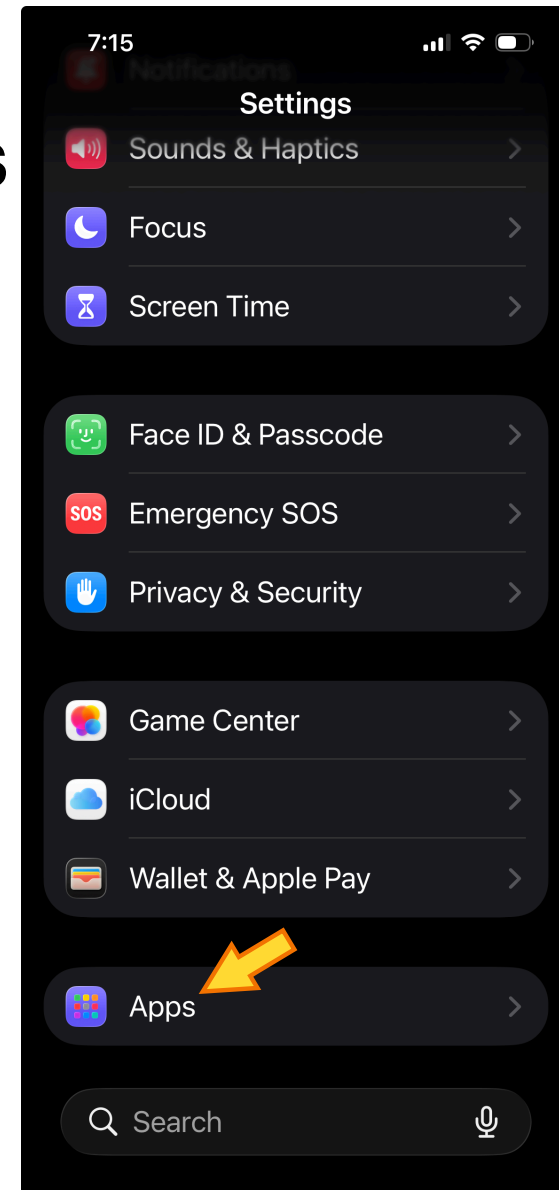

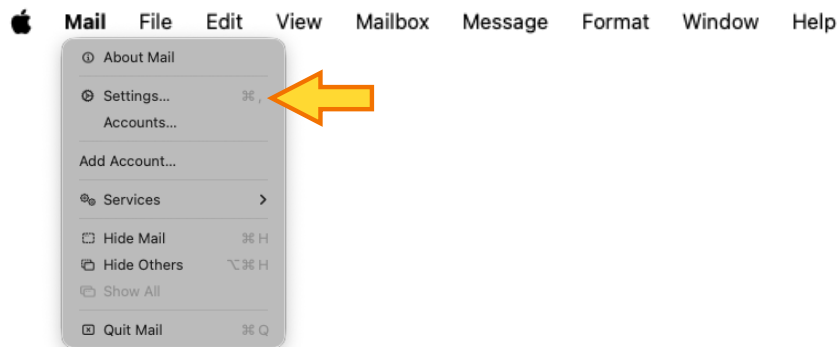

UI Overview: Sometimes you have to “drill down”

- On some control panels, there are controls that are not immediately visible
- The images on the right show control panels with items that have right-angle bracket and information icons
- Clicking on these icons reveals additional controls for that item
- When these additional controls are revealed they tend to be presented in popup dialog windows

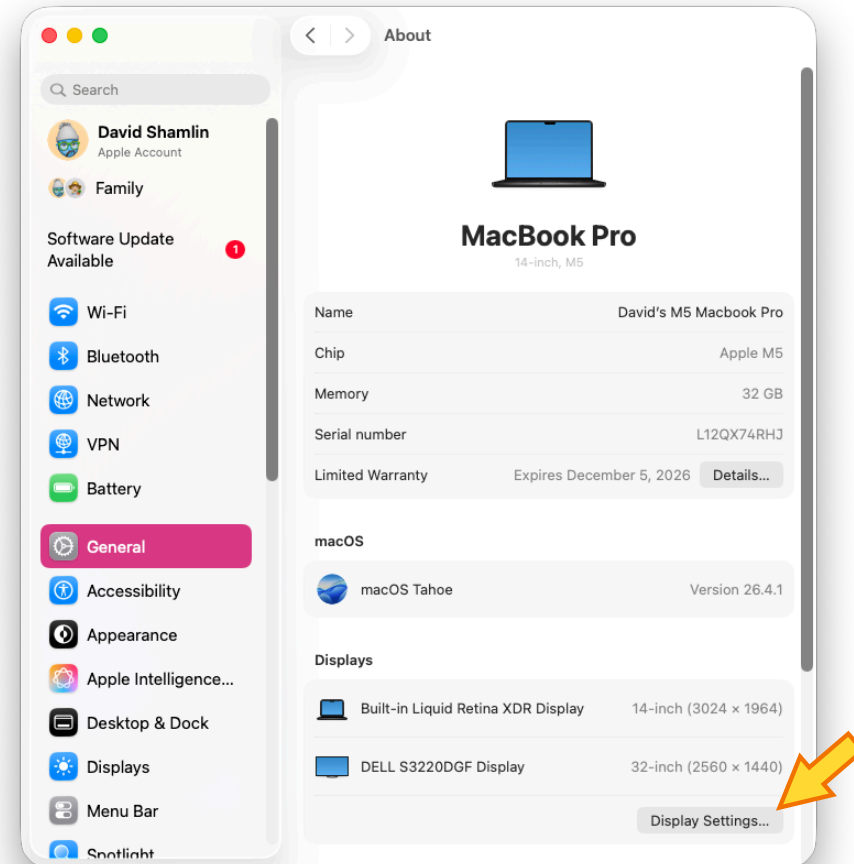

UI Overview: Accessing App Settings

- On iPads and iPhone, app settings are accessed by clicking the “App” item found at the bottom of the sidebar in the Settings app. (See the image to the right.)
- On Macs, app settings are accessed via the “Settings...” item in the app menu on the Menu Bar. (See the image below.)

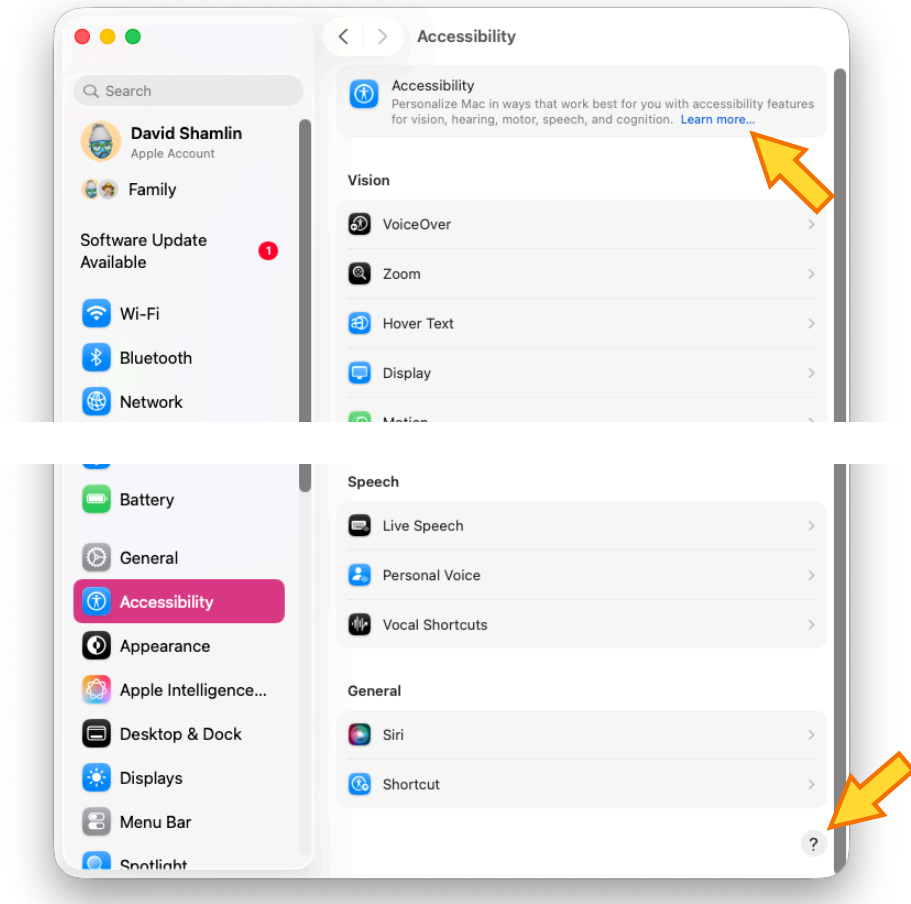

UI Overview: Some control panels redirect you to other control panels

- Some control panels will contain controls that “move” you to another control panel
- The image to the right shows the **About** category’s control panel
- Clicking the button labeled “Display Settings...” takes you to the **Displays** category’s control panel

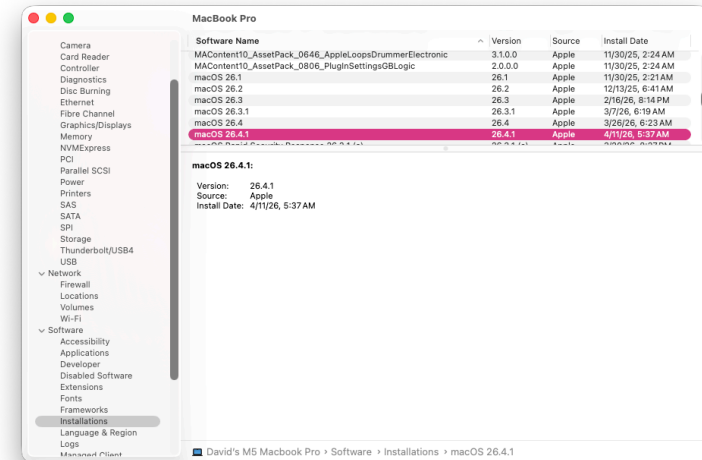

UI Overview: Accessing Help Guide Information

- The image to the right show the control panel for the **Accessibility** settings category
- The textbox labelled “Accessibility” at the top of the control panel has a “Learn more...” link; clicking this link takes you to the help guide page for the accessibility features
- The question mark icon at the bottom of the pane takes you to the help guide page for this category’s settings
- Many control panels include the question mark icon; this icon tend to appear at/near the bottom of the control panel
- Fewer control panels include a textbox with a “Learn more...” link; these textboxes tend appear at the top of the control panel

Potential Pitfalls

- When you encounter a change in behavior on your device or with an app, the change might be due to a change to some setting that you didn't directly make yourself. Or you may have recently changed a setting without realizing doing so affects behaviors in places you didn't expect.
- In addition to manually/explicitly changing settings yourself, settings can also change when
 - OS and App upgrades are installed on your device
 - Upgrades can both add/remove settings and change the value of settings
 - You interact with some popup dialogs that appear when using an App
 - More specifically when you see a dialog asking if an app or website can use your device's camera, determine your location, access your local drive, or access networked devices/resource, the selection you make is changing a setting
- Remember that System Settings affect behaviors broadly. I.e., a System Setting change may affect more than you expect.
- Tip: If something (e.g., an app or system feature) is behaving differently than the last time you used it, ask yourself...
 - Has your device's OS been updated relatively recently (i.e., since the last time you used the app/feature in question)?
 - Have you changed any system settings relatively recently (i.e., since the last time you used the app/feature in question)?
- If so, the change in behavior you encountered may be due to a settings change.
 - If you are using a specific app when you encounter a change in behavior like this, first review that app's settings to see if you find any controls that may be causing the change in behavior and "tweak" them to see if that addresses the issues. (If it doesn't, you can always change the controls back to their original state)
 - If reviewing/"tweaking" the apps settings isn't helpful, then review/"tweak" controls for System Setting categories that may have a relationship to the changed behavior
- Tip for Mac users: you can see the exact date and time your device's OS and apps you have installed were upgraded.
 - On Mac: Click on the Apple icon in the Menu Bar, then press and hold the **opt key** on the keyboard. The "About This Mac" item in the Apple menu will change to "System Information". Click the "System Information" to reveal a window that looks similar to the image above. In the sidebar on the right, click the "Installations" item found beneath the "Software" item. The right hand pane of the window will change to look similar to the image above. Scroll through the listbox at the top of the pane on the right hand side of the window and click to find the name of the app (the operating system has the name "macOS" in this listbox).
 - Unfortunately for iPhone/iPad only users, I don't know of a way to find the date/time the OS and/or apps were last updated on those devices.

Potential Pitfalls: Third-party browser settings

- App settings for third-party browsers (i.e., any browser besides Safari) are found in unique (unusual?) locations.
- For what it's worth, I don't know of any other kinds of installed apps that organize their settings in this way.
- The three pages that follow include screen captures from a Mac, an iPhone, and an iPad (in that order) that show Chrome app setting control panels as an example of how third-party browser arrange settings differently than other apps.
- Third-party browsers are the only kinds of apps that I know of that arrange their app settings in this way.

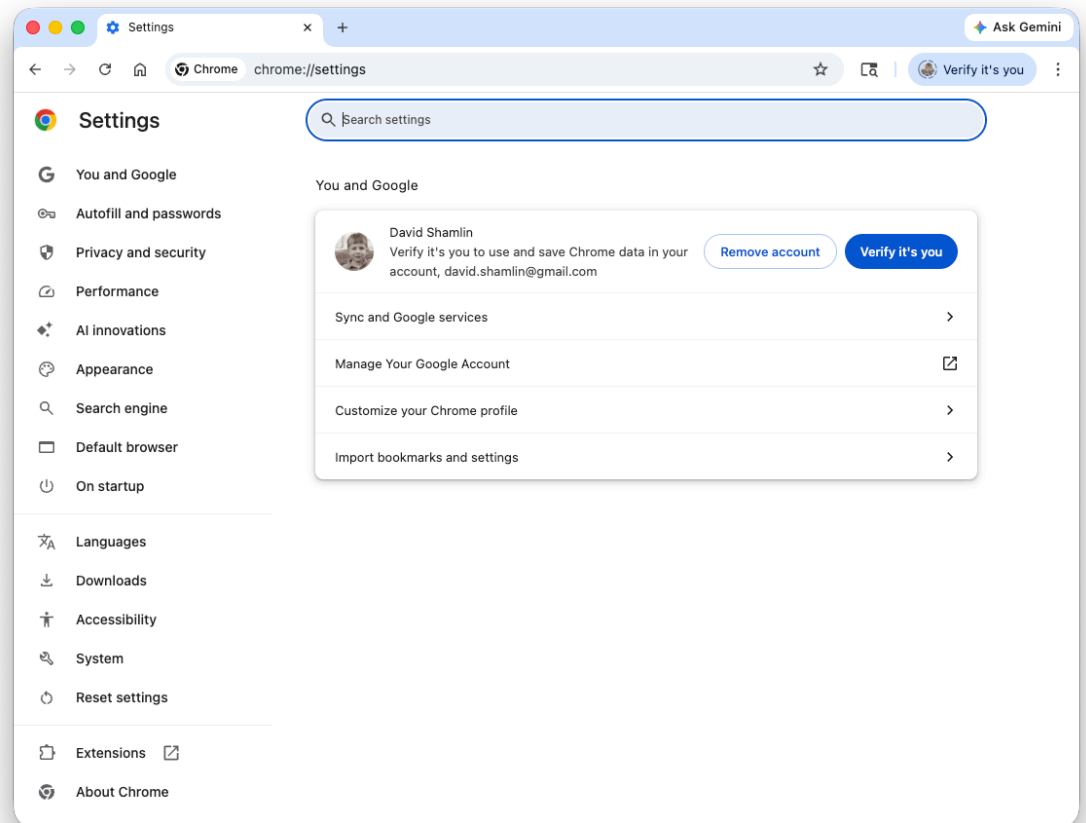

3rd Party Browser Settings

Example: Chrome on Mac

When you select

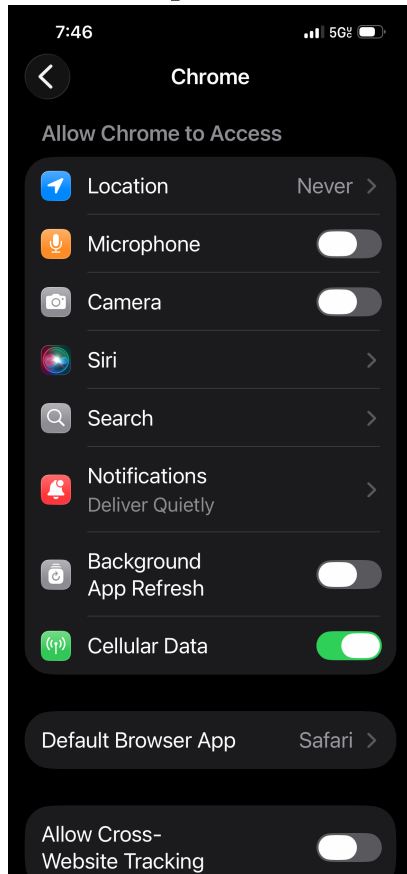

Chrome > Settings

from the Menu Bar while in the Chrome app, a tab opens in the active Chrome window (similar to the image on the right.) I.e., there is no “Apple native” settings control panel for the Chrome browser.

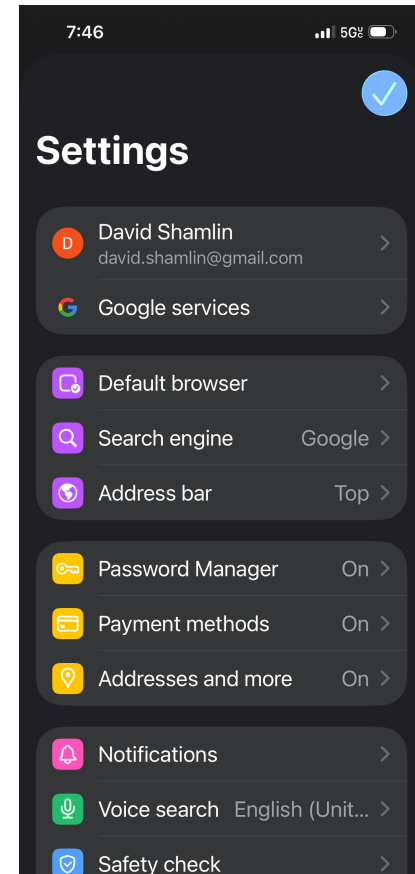

3rd Party Browser Settings

Example: Chrome on iPhone

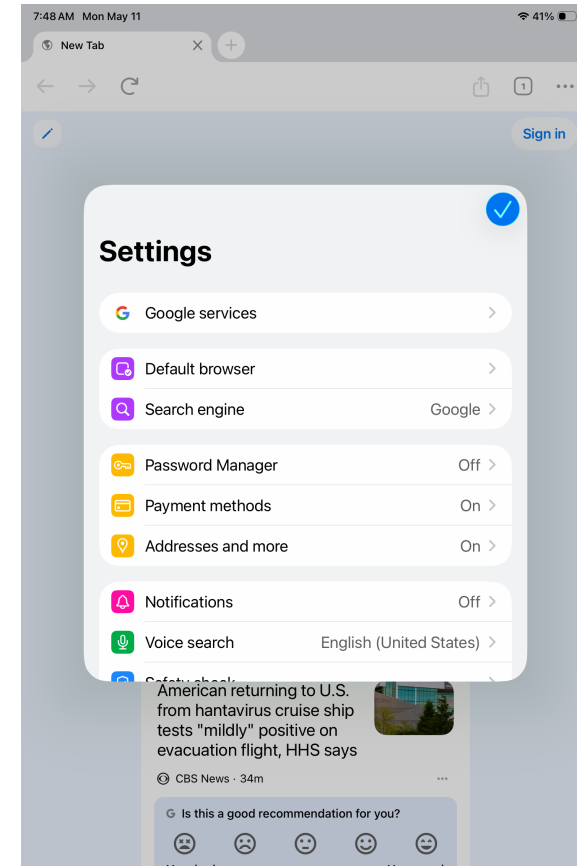

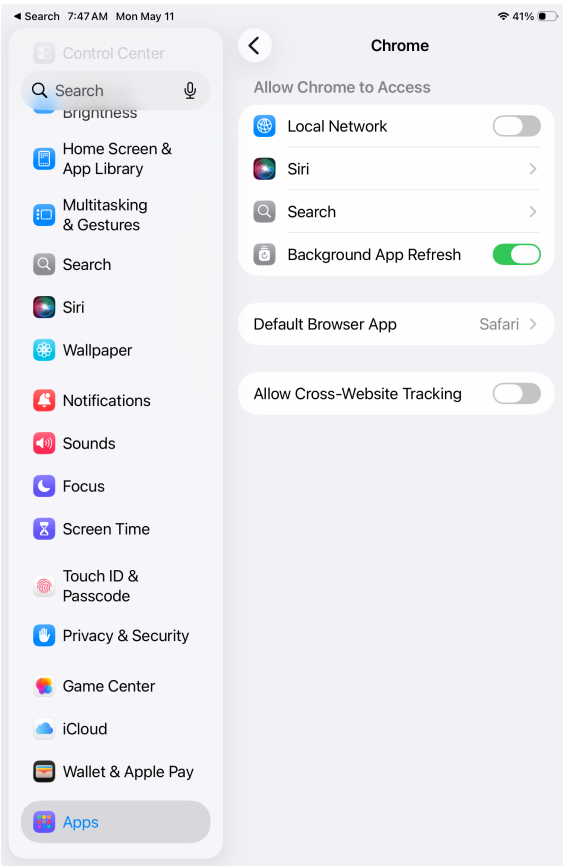

- The image on the left shows the Chrome app control panel in the Systems app.
- The image on the right shows the Settings window/view in the Chrome app itself. (To see this view, tap on the three dots icon in the toolbar inside the Chrome app, then click tap the Settings icon.)
- Note how each of these view shows a different set of items.
- If you need/want to modify Chrome settings, they will be in one of these two locations.

3rd Party Browser Settings

Example: Chrome on iPad

- The image on the left shows the Chrome app control panel in the Systems app.
- The image on the right shows the Settings window/view in the Chrome app itself.
(To see this view, tap on the three dots icon in the toolbar inside the Chrome app, then click tap the Settings icon.)
- Note how each of these view shows a different set of items.
- If you need/want to modify Chrome settings, they will be in one of these two locations.

Inventory of System Setting Categories

- The following pages provide an inventory (in tabular form) of System Setting categories for Mac, iPhone, and iPad
- Each row in the tables on these pages is a category
- In addition to a brief description of each category, there are columns that indicate
 - Which device type(s) the category appears on
 - Whether the category's **role**
Note: if neither the “Cosmetic” or “Information” columns are checked for a category, then that category is “Functional”
- The categories are listed in the order they appear in the System Settings/Settings apps

Setting Categories

Category	Mac	iPad	iPhone	Cosmetic	Informational	Security	Privacy	Description
Apple Account	✓	✓	✓	✗	✗	✓	✗	- Sign in or sign out of your Apple Account - Enable features like Find My Mac, iCloud Drive, and Photos sync - Manage iCloud storage
Family	✓	✓	✓	✗	✗	✓	✗	Share access to subscriptions, purchases, and more with your Family Sharing group. Adults can also set up child accounts and manage parental controls.
Airplane Mode	✗	✓	✓	✗	✗	✗	✗	Turn on & off wi-fi, bluetooth, and cellular reception collectively with one toggle control.
Wi-Fi	✓	✓	✓	✗	✗	✗	✗	- Connect and manage networks - Copy the network password if previously connected
Bluetooth	✓	✓	✓	✗	✗	✗	✗	- Manage Bluetooth settings - Pair devices
Network	✓	✗	✗	✗	✗	✗	✗	Set up and manage Wi-Fi, Ethernet, Thunderbolt, firewall, and other network services.
Cellular	✗	✗	✓	✗	✗	✗	✗	- Turn cellular data and roaming on/off - Set which apps and services use cellular data - Set other cellular data options
Personal Hotspot	✗	✗	✓	✗	✗	✗	✗	Share the internet connection from your iPhone with other devices
VPN	✓	✓	✓	✗	✓	✗	✗	- See VPN service configurations - You can also modify settings for VPN connections you have here—although I recommend you do that using your VPN client's app settings instead
Battery	✓	✓	✓	✗	✗	✗	✗	- Track your Battery health, charging, and usage statistics - Customize energy-saving settings
General > About	✓	✓	✓	✗	✓	✗	✗	See information about your device: processor (CPU) type, size of memory (RAM) and storage (local; not cloud drives), operating system version, etc
General > Software Update	✓	✓	✓	✗	✗	✗	✗	- See which operating system version is installed on your device - Control whether or not updates are installed automatically - Manually start an update if any are pending
General > Storage	✓	✗	✗	✗	✗	✗	✗	See how much of your local storage is currently in use and how the space is used (e.g., by file type and/or by app)
General > iPad Storage	✗	✓	✗	✗	✗	✗	✗	- See how much of your local storage is currently in use and how the space is used (e.g., by file type and/or by app) - Offload (i.e., uninstall) unused apps - Review and delete large files attached to Message app texts
General > iPhone Storage	✗	✗	✓	✗	✗	✗	✗	- See how much of your local storage is currently in use and how the space is used (e.g., by file type and/or by app) - Offload (i.e., uninstall) unused apps - Review and delete large files attached to Message app texts
General > AppleCare & Warranty	✓	✓	✓	✗	✗	✗	✗	- View device's warranty and AppleCare status - Purchase additional coverage for eligible devices Note: You will see all your devices here regardless of which device you are using to view this Settings category
General > AirDrop & Continuity	✓	✗	✗	✗	✗	✗	✗	- Use AirDrop & Continuity settings to start something on one Apple device and hand it off to another, send files to Apple devices near you with AirDrop, or allow other devices to stream content to your Mac with AirPlay Receiver. - Controls for Mirroring and AirPlay are found here
General > AirDrop	✗	✓	✓	✗	✗	✗	✗	- AirDrop allows you to transfer files wirelessly between Apple devices (yours and other people's) - Controls in this Settings category allow you to - Restrict who can share files with you via AirDrop - Disable AirDrop through cellular internet connections (i.e., restrict cellular data use)
General > AirPlay & Continuity	✗	✓	✓	✗	✗	✗	✗	- Manage how your iPad connects and interacts with other Apple devices for streaming content and sharing tasks - You can adjust settings for AirPlay, which lets you stream audio and video to compatible devices, and Continuity features that enable seamless transitions between your Apple devices.
General > Picture in Picture	✗	✗	✓	✗	✗	✗	✗	- Turn “picture-in-picture” on and off - When turned on and you are using videos and FaceTime calls will automatically continue in picture-in-picture when you swipe up on the screen
General > Screen Capture	✗	✓	✓	✗	✗	✗	✗	A single toggle control that allows you to chose whether screenshots are briefly displayed as thumbnails in the lower left hand corner of the screen or as full screen views

Category	Mac	iPad	iPhone	Cosmetic	Informational	Security	Privacy	Description
General > CarPlay	✗	✗	✓	✗	✗	✗	✗	Customize how your iPhone interacts with your car's infotainment system, including rearranging app icons, adjusting audio settings, and managing connections
General > AutoFill & Passwords	✓	✓	✓	✗	✗	✗	✗	- Customize how your iPhone interacts with your car's CarPlay system, including rearranging app icons, adjusting audio settings, and managing connections Note: You have to pair your iPhone with your car's CarPlay system <u>before</u> you can make any settings changes in this category
General > Background App Refresh	✗	✓	✓	✗	✗	✗	✗	- Disable/enable which of your apps refresh in the background in this category. - Some apps keep running in the background even when you're not using them. While handy for things like email, too many can slow performance and drain battery.
General > Date & Time	✓	✓	✓	✗	✗	✗	✗	- Control whether or not your device sets the date & time automatically using an internet time service - Set the timezone for your device - Set the format dates & times are shown
General > Dictionary	✗	✓	✓	✗	✗	✗	✗	Add / remove additional languages (e.g., Spanish, French, German, etc) to the system's dictionary service
General > Fonts	✗	✓	✓	✗	✓	✗	✗	View the fonts that are installed on your device.
General > Keyboard	✗	✓	✓	✗	✗	✗	✗	- Configure your device's <u>virtual</u> (i.e., on screen keyboard; you can connect physical keyboards to iPads & iPhone; this setting control panel does not influence external keyboards) - There are a number of options available. e.g., you can turn on/off predictive text and auto-correct, etc) - Add & delete keyboards for different languages (e.g., French, Spanish, German, etc)
General > Language & Region	✓	✓	✓	✗	✗	✗	✗	- Set the language you want shown - Select the formats used to show dates, times, numbers, etc
General > TV Provider	✗	✓	✓	✗	✗	✗	✗	- TV/cable providers often provide some Internet streaming services - This control panel allows you to sign in to your TV/cable provider account - Once signed in, you can access the Internet streaming services included with your TV/cable provider. E.g., I have HBO in my cable subscription service; by signing into my cable subscription account in this Settings control panel, I can access HBO content using the HBO app on my iPhone & iPad.
General > VPN & Device Management	✗	✓	✓	✗	✗	✗	✗	- Install, view, or remove VPN and device configuration profiles. - Configuration profiles are files that standardize settings for iPhone and iPad devices, Mac computers, Apple TV 4K, and Apple Watch. Note: This Setting category is of very little use/value to consumer users; it is primarily used in corporate environments
General > Legal & Regulatory	✗	✓	✓	✗	✓	✗	✗	View legal and regulatory documentation Apple is required by law to include on mobile devices
General > Login Items & Extensions	✓	✗	✗	✗	✗	✗	✗	- Select the apps, documents, and server connections that open automatically when you log in to your Mac - Turn Apple and third-party extensions on and off for your Mac - Select extensions to include in the Share menu
General > Sharing	✓	✗	✗	✗	✗	✗	✗	Set options for sharing your computer, files, printers, media, etc
General > Startup Disk	✓	✗	✗	✗	✗	✗	✗	- Select the disk drive that contains the OS; your Mac will use this disk to load the OS when you turn on your device - By default, Mac will be configured to use the drive "built in" to your device Note: This Setting category is of very little use/value to consumer users; it is primarily used in corporate environments
General > Time Machine	✓	✗	✗	✗	✗	✗	✗	- Allows you to configure macOS's backup service (i.e., Time Machine) - You can define which drive is used by Time Machine to store your backups - You can configure Time Machine to automatically backup your device every hour, day, or week
General > Device Management	✓	✗	✗	✗	✗	✗	✗	- Install, view, or remove configuration profiles. - Configuration profiles are files that standardize settings for iPhone and iPad devices, Mac computers, Apple TV 4K, and Apple Watch. Note: This Setting category is of very little use/value to consumer users; it is primarily used in corporate environments
General > Transfer or Reset	✓	✗	✗	✗	✗	✗	✗	- Transfer your documents, apps, user accounts, and settings to your Mac from another Mac or PC, or from a Time Machine backup - Erase all the content and settings on your Mac Note: These settings are typically used when you purchase a new device and/or are getting rid of an existing device.
General > Transfer or Reset iPad	✗	✓	✗	✗	✗	✗	✗	- Transfer your documents, apps, user accounts, and settings to your iPad from another iPad Note: These settings are typically used when you purchase a new device and/or are getting rid of an existing device.
General > Transfer or Reset iPhone	✗	✗	✓	✗	✗	✗	✗	- Transfer your documents, apps, user accounts, and settings to your iPhone from another iPhone Note: These settings are typically used when you purchase a new device and/or are getting rid of an existing device.
General > Shut Down	✗	✓	✓	✗	✗	✗	✗	Allows you to turn off your device

Category	Mac	iPad	iPhone	Cosmetic	Informational	Security	Privacy	Description
Accessibility	✓	✓	✓	✓	✗	✗	✗	• Customize your Mac in ways that work best for you with accessibility features for vision, hearing, mobility, speech, and cognition
Apple Pencil	✗	✓	✗	✗	✗	✗	✗	• Configure the following Apple Pencil behaviors: • Limit use of fingers to scrolling • Allow device to convert your handwriting to text when writing in a text area • Define Pencil Gestures for bottom left and bottom right corners of the screen
Camera	✗	✓	✓	✗	✗	✗	✗	• Configure the following camera behaviors: • Video & Slo-mo resolution & refresh rates • Composition grid, level, and mirror front camera • Automatically improve photos of scenes using intelligent (i.e., “AI”) image recognition • Correct lens distortion • Open the camera from the Lock Screen • Automatically save images taken in Message Camera to the Photo app Library
Control Center	✗	✓	✓	✗	✗	✗	✗	Choose what shows in the Menu Bar (like battery percentage, Bluetooth, Wi-Fi).
Display & Brightness	✗	✓	✓	✓	✗	✗	✗	• Configure display appearance • Change Liquid Glass style (i.e., “clear” or “tinted”) • Control the screen’s brightness • Configure “Night Shift” (automatically shifts to a warmer color spectrum after dark; you can also configure the “degree” of warmth • iPad only: Configure if your device locks/unlocks when you use a “smart” cover • iPhone only: Set the period of time until your device lock’s itself • iPhone only: Enable/disable whether your device wakes up when you pick the device up • iPhone only: increase the size of text/controls
Home Screen & App Library	✗	✓	✓	✗	✗	✗	✗	• Make app icons on home screen large • Choose whether the App Library and recently used apps are included in the Doc • Choose if notification badges are shown in the App Library
Multitasking & Gestures	✗	✓	✗	✗	✗	✗	✗	• Choose if apps open in full screen mode, windows apps mode, or Stage Manager mode • Turn on/off “productivity gestures” (e.g., double-tap with three fingers to undo; swipe left with three fingers to undo; swipe right with three fingers to redo; etc.)
Search	✗	✓	✗	✗	✗	✗	✗	• Control which apps are included Spotlight searches • Chose whether you see recent searches in the Spotlight search box • Chose whether content from Apple and its business partners are included in Spotlight search results
Siri	✗	✓	✓	✗	✗	✗	✗	• Customize some Siri behaviors e.g., trigger phrase, keyboard shortcut trigger, language, voice style, etc) • Control which individual apps are included in Spotlight search results • Note: If your device supports Apple Intelligence, you will not see the Apple Intelligence... category instead a category named Siri
Standby	✗	✗	✓	✗	✗	✗	✗	• Normally when your phone is connected to a charger, the screen will turn off (i.e., go to sleep) after a few moments • You can configure your phone so that the screen shows you the date and time when your phone is leaned upright on its long side • This control panel allows you to enable/disable this behavior • You can also chose whether you see notifications in this mode
Appearance	✓	✗	✗	✓	✗	✗	✗	• Switch between Light, Dark, or Auto Mode • Change accent and highlight colors • Adjust sidebar icon sizes • Adjust scrollbar visibility & behaviors
Apple Intelligence...	✓	✗	✗	✗	✗	✗	✗	• Turn Apple Intelligence features on & off • Turn Siri on & off • Customize some Siri behaviors (e.g., trigger phrase, keyboard shortcut trigger, language, voice style, etc) • Note: If your device does not support Apple Intelligence, you will not see this category; instead you will see the Siri category
Desktop & Dock	✓	✗	✗	✓	✗	✗	✗	• Resize the Dock • Set the Dock to hide automatically • Change the default web browser
Displays	✓	✗	✗	✓	✗	✗	✗	• Rearrange or manage multiple displays (drag to change position, choose which is primary) • Adjust rotation (useful if you have a monitor mounted vertically) • Manage Night Shift (schedule, color temperature)
Menu Bar	✓	✗	✗	✓	✗	✗	✗	• Choose items to include in the menu bar • Chose items that appear in Control Center
Spotlight	✓	✗	✗	✗	✗	✗	✗	• Change the scope of content that appear in Spotlight search results • Note: Spotlight helps you quickly find things on your device and shows suggestions from the Internet, Music, App Store, etc.

Category	Mac	iPad	iPhone	Cosmetic	Informational	Security	Privacy	Description
Wallpaper	✓	✓	✓	✓	✗	✗	✗	• Change your desktop background
Notifications	✓	✓	✓	✗	✗	✗	✗	- Specify when you don't want to be disturbed by notifications - Control how notifications are shown in Notification Center - This settings category allows you to control the behavior of notifications at the app level; i.e., if an app supports notifications, you will find an entry for that app in this settings category control panel
Sound	✓	✗	✗	✗	✗	✗	✗	- Manage sound effects - Adjust your audio output and input preferences
Sounds	✗	✓	✗	✗	✗	✗	✗	- Manage sound effects - Adjust your audio output and input preferences
Sounds & Haptics	✗	✗	✓	✗	✗	✗	✗	- Manage sound effects & haptic feedback - Adjust your audio output and input preferences
Focus	✓	✓	✓	✗	✗	✗	✗	- Create Focus profiles that can minimize distractions by pausing and silencing all notifications or allowing notifications only from certain people or apps - When you need to stay on task and minimize distractions, use Focus. You can use a Focus to pause and silence all notifications or allow only certain notifications—for example, ones from colleagues on an urgent project. You can also share that you've silenced notifications so contacts know you're busy.
Screen Time	✓	✓	✓	✗	✗	✗	✗	- Turn Screen Time on or off - Set parental controls for a child's device, including app limits, content and web access, and approval requests - Set a Screen Time passcode
Lock Screen	✓	✗	✗	✗	✗	✗	✗	- Control if/when your device will revert to the lock screen after a period of inactivity - Chose which related controls are included on the lock screen
Privacy & Security	✓	✓	✓	✗	✗	✓	✓	- Control which apps can use your camera, mic, location, etc Mac Only: Enable or disable FileVault (disk encryption)
Touch ID & Password	✓	✗	✗	✗	✗	✓	✓	- Change a login password (on Mac) or passcode (on iPad & iPhone) - Add fingerprints (for biometric authentication) - Enable Apple Watch unlock
Face ID/Touch ID & Passcode	✗	✓	✓	✗	✗	✓	✓	- Change a login password (on Mac) or passcode (on iPad & iPhone) - Add fingerprints or faces (for biometric authentication)
Users & Groups	✓	✗	✗	✗	✗	✗	✗	- Manage your Mac user accounts - Create and delete individual user accounts - Associate user accounts with privilege groups (not generally useful for consumer users; primarily used by corporate/business users)
Internet Accounts	✓	✗	✗	✗	✗	✗	✗	- Add & delete your internet accounts from Google, Microsoft, Yahoo, etc, so that you can use those accounts in your Mac apps - Per account, select account features you want to use (mail, contacts, calendars, and notes)
Emergency SOS	✗	✗	✓	✗	✗	✗	✗	- In an emergency, you can use your iPhone to quickly/easily call for help, share your Medical ID, and alert your emergency contacts - This settings category contains controls that allow you - Define the button(s) that trigger an emergency call - Trigger your iPhone to make an emergency call if you are in a “severe” auto accident - Define who your emergency contacts are
Game Center	✓	✓	✓	✗	✗	✗	✗	• Game Center is a social gaming service that lets you interact with others in online multiplayer games.
iCloud	✓	✓	✓	✗	✗	✓	✓	- View how your iCloud Drive storage utilization - View which apps are saving data to your iCloud Drive - Enable/disable apps ability to save data to your iCloud Drive - Turn on/off “Advanced Data Protection” (i.e., end-to-end encryption of data stored in iCloud)
Wallet & Apple Pay	✓	✓	✓	✗	✗	✗	✗	- Manage payment details - Add & remove a debit or credit card
Keyboard	✓	✗	✗	✗	✗	✗	✗	- Set keyboard shortcuts - Adjust your keyboard's backlighting - Add layouts for typing in other languages - Set up Dictation
Mouse	✓	✗	✗	✗	✗	✗	✗	- Control the behaviors of mice you connect (via Bluetooth or USB) to your Mac - Behavior you can control are tracking speed, secondary click button, double-click speed, and scrolling speed

Category	Mac	iPad	iPhone	Cosmetic	Informational	Security	Privacy	Description
Trackpad	✓	✗	✗	✗	✗	✗	✗	• Turn gestures (like swipe between desktops) on or off • Adjust click sensitivity
Printers & Scanners	✓	✗	✗	✗	✗	✗	✗	• Choose a default printer (if you have more than one printer defined/connected) • Add additional printers/scanners • Access a printer/scanner's controls (which will vary/depend on the printer/scanner itself; ie, different printers/scanners will have different setting controls)
Apps	✗	✓	✓	✗	✗	✗	✗	• App settings controls panels are access inside this group • You can also chose default apps for mail, messaging, calling, browser, etc
