

Lab: Browsers

Basics: browser windows & tabs, loading pages, using links

1. Start (launch/open) Chrome
 1. Note the following parts of the browser **window**
 1. The **toolbar**
 2. The **address bar**
 3. The page view **pane**
 2. Go to DESIG site: olli-shamlin.github.io/design
 1. Note the loading of the **page**
 2. Note the page the loads is the site's **home page**
 3. Use the **refresh control** to reload the page
 4. Identify the **links** on the page
 5. Click one of the links on the page while paying attention to the refresh control; note how it (briefly) turns into an "X"
 3. Open a second **tab** in the browser window
 1. Load Wikipedia's home page in the new tab
 2. Move between tabs
 4. Open a second browser window
 1. Load Amazon's home page in the new window
 5. Move the tab with Wikipedia's home page to the new window
 6. Start (launch/open) Safari
 1. Note how the menu bar's app menu name changes when you click on one of the Chrome windows and then click on the Safari window
 2. Open two pages in two tabs in the Safari window
 3. Open a second Safari window and move a tab between windows

The Browser Toolbar

1. Compare/contrast the controls found on Safari & Chrome's toolbars
 1. Note close/minimize/maximize controls
