Want to master your devices and make new friends along the way? Join the Digital Explorers SIG! This group formed out of a course in Fall 2025 where the members wanted to continue learning together. ~~This highly welcoming group is a fantastic place to connect with fellow OLLI members while getting a better handle on the digital world.~~

- From tech novices to digital pros, **everyone is welcome!** We pride ourselves on offering a safe, supportive, and friendly space for beginners. Bring your device, your curiosity, and all your basic questions—there's no judgment here, just peers helping peers grow more comfortable with technology.
- **Our focus** is on hardware, software, the Internet, and the Cloud—covering practical skills like managing files, using browsers/search engines, and handling security or privacy concerns.
- **Member-Driven Topics:** We pick our focus together. The group spends time each meeting discussing and deciding via consensus what topics or services we will explore next.
- **Hands-On & Expert-Led:** Facilitated by a software engineer with 35 years of experience, we dive into discussions and "hands-on" practice with our own devices, tackling everything from daily tech uses to how these digital technologies work.
- **Small & Supportive:** We limit our group size so everyone gets a chance to ask questions, share insights, and overcome their specific tech challenges.

Meeting Details: This group meets biweekly at Erwin Mill on Friday mornings starting at 9:00 a.m. We typically wrap up within two to three hours, depending on how deeply the group wants to explore the chosen topic. More information will be provided to enrollees.
